Profile

Senior Full-Stack Software Engineer with 10+ years of experience designing and delivering scalable web applications, backend microservices, and cloud-native systems. Experienced in Golang, Node.js, PHP (Laravel), React.js, JavaScript, REST APIs, Redis, Kafka, Docker, Kubernetes, and event-driven architectures. Passionate about AI-assisted software development using modern AI coding tools to accelerate development, debugging, and productivity. Strong experience collaborating with cross-functional teams and leading technical initiatives from design through production deployment.

Technical Skills

Frontend
- React.js
- Next.js
- JavaScript
- TypeScript
- HTML5
- CSS3
- Tailwind CSS
- Bootstrap

Backend
- Node.js
- Express.js
- REST APIs
- PHP
- Laravel
- Golang
- Fiber (Go Framework)
- Kafka
- Redis

DevOps & Tools
- Docker
- Git
- Jenkins
- Grafana
- Linux
- Nginx
- AWS

Database
- PostgreSQL
- MySQL
- MongoDB

Education

Yangon, Myanmar — **BA (English),** *Dagon University*

Yangon, Myanmar — **Diploma In Project Management,** *ABE (UK)*

Yangon, Myanmar — **Service + Web Development Course,** *IMCS Education Center*

Languages

- Myanmar
- English

Professional Experience

08/2025 – Present
Cambodia

Loma Technology, *Full-Stack Developer*

- Architect and maintain scalable backend microservices and RESTful APIs using Golang and PHP following Clean Architecture principles.
- Designed secure JWT-based authentication and authorization mechanisms.
- Built and documented APIs using Swagger/OpenAPI specifications.
- Leveraged Goroutines and Channels to process high-concurrency betting transactions efficiently.
- Developed unit and integration tests to improve system reliability and reduce production issues.
- Implemented event-driven communication using Redis Pub/Sub and Kafka.

09/2024 – 04/2025
Bangkok, Thailand

Tiltedxyz, *Full-Stack Developer*

- Developed responsive React.js applications for modern web platforms.
- Built reusable UI components to improve consistency and development efficiency.
- Integrated RESTful APIs using Axios.
- Optimized application performance through lazy loading and code splitting.
- Improved rendering performance and user experience.
- Collaborated with backend engineers to deliver scalable web applications.

06/2019 – 06/2024
Yangon, Myanmar

Findix Myanmar, *System Development Team Leader*

- Designed and developed scalable web applications using React.js and Next.js.
- Built reusable UI components following component-based architecture.
- Developed responsive interfaces using Tailwind CSS, Bootstrap, HTML5, and CSS3.
- Integrated frontend applications with RESTful APIs.
- Optimized frontend performance and application responsiveness.
- Led frontend development and mentored developers on React best practices.
- Built reusable React components for video streaming and dashboard features
- Designed responsive layouts using Tailwind CSS.
- Integrated REST APIs using Axios.
- Optimized rendering performance with lazy loading and code splitting.
- Implemented reusable component architecture to accelerate feature development.

02/2017 – 02/2019
Yangon, Myanmar

Netcore Internet, *Senior Web Developer*

- Collaborated with the product team to develop complex web features using Laravel, Bootstrap, and jQuery.
- Optimized complex MySQL queries, reducing report generation time by up to 40% and improving application performance under heavy data loads.
- Created and maintained technical documentation for 100% of implemented features, improving onboarding speed for new developers and reducing dependency on senior engineers.
- Enforced clean code practices and utilized OOP design patterns to ensure code maintainability.

02/2016 – 10/2016
Yangon, Myanmar

Groovez Asia, *Web Developer*

- Translated business requirements into scalable web application solutions, successfully delivering 10+ client projects across different business domains.
- Designed and implemented full-stack web applications, improving client workflow efficiency and reducing manual operations by up to 30%.
- Identified, troubleshooted, and resolved critical bugs and application bottlenecks.

10/2014 – 11/2015
Yangon, Myanmar

Active Agent, *Web Developer*

- Built custom web applications utilizing PHP frameworks (CodeIgniter), HTML, CSS, JavaScript, and MySQL.
- Executed full-stack tasks focused on UI adjustments, backend business logic, and overall application performance tuning.

Projects

Kla Klouk, *Golang, Web Sockets, Redis, Microservices*
Tech: Golang, WebSockets, Redis, Microservices
- Engineered real-time WebSocket microservices handling **5,000+ concurrent users** for live betting transactions.
- Implemented Redis caching to reduce database load by **40%** and ensure sub-50ms response times during peak traffic.
- Designed a distributed wallet system ensuring **ACID compliance** to prevent double-spending or transaction failures during high-frequency requests.

Tournament Management Platform — PHP / Laravel

- Designed and developed a **tournament management platform** using **PHP and Laravel**, supporting tournament creation, registration, scheduling, match management, and result tracking.
- Developed **RESTful APIs** for tournament, player/team, match and ranking workflows.
- Implemented tournament lifecycle management, including **registration, tournament brackets, match progression, scoring, and final results**.
- Designed and optimized **MySQL database schemas, relationships, indexes, and queries** for high-volume tournament and match data.
- Built backend services using Laravel features such as **Eloquent ORM, migrations, validation, queues, jobs, events, and middleware**.
- Improved API and database performance through **query optimization, caching, pagination, and Redis**.
- Implemented background processing using **Laravel Queue** for notifications, tournament updates, and other asynchronous tasks.
- Containerized the application using **Docker** and supported deployment and maintenance across development and production environments.
- Collaborated with frontend developers, QA engineers, and product teams to deliver tournament features and resolve production issues.

Ost Infinity Platform

Tech: Next.js, React, TypeScript, Node.js, MongoDB, OpenAI API, pgvector
- Built a full-stack AI knowledge assistant using **Next.js, TypeScript, Node.js, and** MongoDB, enabling users to upload documents and interact with project knowledge through natural-language queries.
- Developed a **semantic search system** that allows users to search across the entire project using keywords and natural-language queries, leveraging **OpenAI embeddings and similarity search** to retrieve relevant content.
- Implemented a **RAG pipeline** with document chunking, embedding generation, vector storage, and similarity-based retrieval to provide relevant context to the LLM before generating responses.
- Integrated **LLM structured outputs and tool/function calling** to produce reliable JSON responses and execute application-level operations based on user requests.
- Developed secure authentication and **role-based authorization**, API validation, conversation history, error handling, and streaming AI responses.

Tilted, *React.js,Node.Js,Express.js,MongoDB,Tailwind CSS*
- **Tech:** React.js, Node.js, Express, MongoDB, WebRTC, Tailwind CSS
- Built a high-performance video streaming dashboard supporting **real-time chat and live game feeds** with zero buffering latency.
- Developed a custom reusable component library (Reels, Scheduler, Player Widgets) that reduced UI development time for new features by **30%**.
- Integrated a secure payment gateway and optimized MongoDB indexes to handle **rapid reel scrolling** with sub-200ms load times.

Integrated Managent System, *Laravel,html,css,javascript,jquery,ajax,json*
- **Tech:** Laravel, JavaScript, MySQL, AJAX, Bootstrap
- Architected a full-scale Enterprise Resource Planning (ERP) system managing **200+ employees** across Attendance, Leave, and Vehicle logistics.

- Built a granular Role-Based Permission system that allowed admins to customize access for 5 different user tiers without touching the code.
- Automated the OT (Overtime) calculation logic, reducing the HR team's monthly payroll processing time from **3 days to 4 hours**.

School Management, *React.js,Node.Js,Express.js,MongoDB*
- **Tech:** React.js, Node.js, Express.js, MongoDB, JWT Authentication, REST APIs, Mongoose, Tailwind CSS
- Engineered a comprehensive school management platform serving **500+ students and 50+ teachers**, streamlining student admissions, attendance tracking, timetable generation, and academic administration.
- Developed end-to-end student lifecycle management including admission/registration, profile creation, class/section assignment, and automated student ID generation—reducing manual data entry time by **70%**.
- Built a real-time attendance tracking system with one-click bulk updates, generating instant reports and automatic parent notifications via email/SMS, improving attendance accuracy from **75% to 98%**.
- Created an intelligent timetable generator that automatically resolves scheduling conflicts, assigns teachers to subjects, and allocates classrooms—reducing timetable creation from **2 weeks to 2 hours**.
- Implemented comprehensive teacher management with qualification tracking, subject specializations, class assignments, and leave management with automated approval workflows.
- Optimized MongoDB queries using indexing and aggregation pipelines, reducing complex student report generation time from **5 seconds to under 500ms** for 1,000+ student records.
- Designed JWT-based role-based access control with three distinct user tiers (Admin, Teacher, Student/Parent), ensuring data privacy and appropriate access levels for each role.

Myanbox construction Mall, *PHP, WordPress, HTML, CSS, JavaScript, jQuery, AJAX, JSON*
- **Tech:** PHP, WordPress, HTML, CSS, JavaScript, jQuery, AJAX, JSON
- Developed and maintained the Myanbox Construction Mall website using PHP and WordPress.
- Built Admin Management functionality for website administration.
- Developed Company Management and Freelancer Management modules.
- Implemented Blog Management features for content publishing and management.
- Created Service Company, Supplier Company, and Reno Business Company listing systems.
- Developed Freelancer listing and profile management features.
- Built responsive and user-friendly interfaces using HTML, CSS, JavaScript, and jQuery.
- Implemented AJAX and JSON-based functionality for dynamic data handling and improved user experience.
- Customized WordPress themes, plugins, and PHP modules according to business requirements.
- Performed bug fixing, maintenance, and performance improvements.

Tech Stack: PHP, WordPress, HTML, CSS, JavaScript, jQuery, AJAX, JSON, MySQL.

Job Portal Website, *Laravel,html,css,javascript,jquery,ajax,json,Bootstrap*
- **Tech:** Laravel, PHP, MySQL, JavaScript, jQuery, AJAX, JSON, Bootstrap, HTML5, CSS3
- Engineered a full-featured job marketplace connecting 500+ employees and 100+ employers, streamlining the recruitment process from job posting to application tracking.
- Built a dual-dashboard system with separate interfaces for Employees (profile, applied jobs, application history) and Employers (job postings, package management, payment histories), reducing administrative overhead by **60%**.
- Integrated a secure payment gateway for job post packages, enabling employers to purchase and manage subscription plans, generating **$10,000+ in recurring revenue** for the platform.
- Developed an advanced job search engine with multi-filter capabilities (location, industry, salary range, experience level), delivering search results in under **200ms** for 1,000+ active listings.
- Implemented role-based authentication with three distinct user tiers (Admin, Employer, Employee), ensuring data security and appropriate access controls across the platform.

House Rent Website, *Laravel,html,css,javascript,Bootstrap,jquery,ajax,json*
- **Tech:** Laravel, PHP, MySQL, JavaScript, jQuery, AJAX, JSON, Bootstrap, HTML5, CSS3
- Architected a comprehensive property rental marketplace serving 200+ users, enabling seamless property listing, searching, and rental transactions across multiple user types (Individual, Company, Agency).
- Built a multi-vendor system with separate dashboards for Companies and Agencies to manage their property portfolios, track rental histories, and handle property listings—reducing property management time by **50%**.

- Developed a robust property management system with full CRUD operations for both rental and sale properties, supporting 1,000+ active listings with detailed search and filtering capabilities.
- Engineered an integrated contact system connecting property seekers with landlords/agents, facilitating direct communication and reducing response times from **48 hours to under 2 hours**.
- Implemented advanced search functionality with geolocation-based filtering, property type categorization, price range sliders, and availability status—delivering relevant results within **300ms**.
- Designed a comprehensive history tracking system for each property, maintaining complete audit logs of ownership changes, rental periods, and maintenance records
